#### Notes on IP Board Meeting

#### 27 March 1970

	1. Security control of (Def. Science Bd.) report on Security of computer systems.	sought coordination with ting CIA recommends the SSIFIED but controlled by I no controls (UNCLASSIFIED). sure from DOD for an hat the document was  no member of the Board ent version of report became  dether or not the uncontrolled se the vulnerability of our nd illicit penetration. Id; this in turn raised osed "Official Use Only"  or not open literature on as the report would ation. The Board's if in fact the report would ation. The Board's if in fact the report ds it should be classified evised accordingly. The th OGC re possible legal led publication. Finally,
25X1	OS, (in attendance) sought coordination with	N
25X1	IP Board on draft memo to DOD stating CIA recommends the report be considered UNCLASSIFIED but controlled by "Official Use Only". DOD proposed no controls (UNCLASSIFIED).	
25X1	said he was under great pressure from DOD for an immediate answer from CIA in that the document was	
	already at the printers.	
	Considerable discussion but no member of the Board had personally read report. (Present version of report became available to CIA on 13 March 1970.)	
	Basic question seemed to be whether or not the uncontrolled issuance of this report would increase the vulnerability of our	
25X1	computer systems to unauthorized and illicit penetration.  draft memo suggested it would; this in turn raised	
	question of the adequacy of the proposed "Official Use Only" caveat.	
	It is apparently unclear whether or not open literature	
		25X
4 4	Chairman pointed out that the IP Board was not competent	
	at this meeting to assert whether or not the report would increase our vulnerability to penetration. The Board's	25X
	discussion showed a concensus that if in fact the report	25X
	was dangerous to intelligence methods it should be classified and the draft memo would best be revised accordingly. The	
25X1	Chairman suggested check with OGC re possible legal	
	basis for CIA objection to uncontrolled publication. Finally, he instructed IP&E Team to review the report and feedback an opinion on this classification question.	
	Action: IP&E Team to review the report and discuss its	25X
	conclusions with	25X 25X

**Declass Review by NGA** 

		2. Feedback from Chaire als beieffer of D	
	C	2. Feedback from Chair and Spriefing of Executive Director- omptroller and Deputy Directors:	
	· ,	Transfer and Deputy Diffects. 5:	
		Some of the feedback from this briefing:	
		in the leadback from this briefing:	
		- Need construction - with I	
	•	- Need constructive attitude re community concerns and efforts.

	 4. Policy Paper on Sys Support Services
25X1	said paper was written to reflect three goals previously discussed by IP Board:
	a. Develop Systems Support Services skills in-house; minimize dependency on commercial suppliers.
	 b. Avoid duplicate tasking of commercial suppliers by our various ADP centers.
	c. Avoid efforts in each ADP center to build up full range of systems support skills; instead, maximize use of such skills in OCS to support other centers.
	Considerable discussion. Agreed to rewrite the paper to concentrate on the following theme: Do job locally if you can. If can't handle locally, turn to OCS for help. If OCS can't handle it with its staff, then OCS will task commercial source (thereby avoiding duplicate tasking). (This channel to commercial supplier via OCS will be normal for IBM assistance; exceptions as appropriate will be made by OCS in cases involving other commercial suppliers.)
25X1	felt wording of footnote which defines "systems support services" was too broad. agreed to draft a new definition which would better identify the range of services under consideration here which OCS might be called on to provide.
25X1	Action: to re-draft this paper per the above. 25% to phone in suggested re-wording of footnote on page 1 of draft. IP Board will reconsider at next meeting.
	Note: Two earlier drafts of this paper were reviewed and discussed at length by the IP TECH Group. TECH Group attitudes ranged from full acceptance to near full rejection of the thrust of this policy. With the submission of the present draft to IP Board today, further consideration of this

policy is now back under the IP Board... where the

policy concept originated.

	•		
		5. Paper on IBM 2260 Remote Device paper of	25X1
	23	March 1970.	
051/4	•		
25X1		commented that indeed, as this paper points out,	
		the IBM 2260 does present some installation and network problems.	
	•	He said these problems are well known to both OCS and Commo and	
		that they are being worked on. He said OCS hopes to avoid use of the 2260 entirely and is now trying to shape its plans accordingly.	
		one trying to shape its plans accordingly.	
25X1		suggested ORD might be of help here;	25X1
		agreed, saying OCS has been using ORD.	20/(1
25X1		said his paper was simply intended to record the	
		aspects of the problem and to urge action now in finding substitute	
•		equipment before Commo has to string additional special cables	
		for the 2260.	
		Chairman said the Agency will look to OGG to	
	· .	Chairman said the Agency will look to OCS for a suitable alternative to the 2260. He said IP&E Team would draft a	
		general guidance paper on remote terminals for next meeting	, *
		of the Board.	
		Action: Per the above.	
:		6. SIDES	
0EV4		monorated that DD /C has a day of the	
25X1		reported that DD/S has decided to set aside the original SIDES proposal and, instead, to move ahead now on the	
		data circuit requirement as urged by the IP Board.	the Contract
	•	and organizations as arged by the Ir board.	
		Next steps will be to plan suitable data circuit capabilities	
		(i.e., numbers of remotes, location, type, incl. 2260 or not,	
		central switch or not, etc.). DD/S will try to speed this planning	
		through use, if feasible, ofcontract money previously	25X1
		earmarked for SIDES.	
		7 Donom on Continue with ADD	
		7. Paper on Savings via ADP	
25X1		reported that only the DD/I's inputs to this paper had	•
20/(1		been recieved to date but that DD/P and DD/S inputs were	
		"in the mail".	
	r		* *
		Action: Upon receipt of all inputs, IP&E Team (and	25X1
		will put together some kind of consolidation for IP Board consideration	n.

8.	I.G.	effort	in	ADP
----	------	--------	----	-----

Chairman explained I.G. has been asked by DCI to look at the "problem of information handling".

P71	<u> </u>
Three-member team establis	hed:
	7 ` ` ` L

25X1

25X1

Plan still being shaped, but team will undertake several inquiries. Some possibilities:

- System through which State pulls together daily data on cable flows.
  - Report -- for possible follow-ups.
- Intelligence requirements ... and how they relate to inflow of data to CIA.
- Field reporting procedures... and how to streamline and simplify.
- Information flow in relation to decision making in CIA (MIS-type of thing).
  - Possible inputs to long-range ADP planning.

said the "problems" this team is intended to study do not seem to be very clearly defined. He said he feels there is a need for 4 or 5 solid professionals in systems work at the DCI level to perform such studies if we are going to attempt same.

25X1

25X1

25X1

		$\sim$
	4 - 1	9. COMCET Message Concentrator
		· · · · · · · · · · · · · · · · · · ·
25X1		Conid OCC homes to service a CONCORD
23/1		said OCS hopes to acquire a COMCET message
	· .	concentrator in the near future. Basic purpose: bridges the
	•	interface between the computer and all the remote devices
•		including UNIVAC 9300 communications computers.
		COMCET system will replace some black boxes (control units)
		in OCS and will move some of the CPU's work out of the COMCET
		equipment.
		Three roles for COMCET:
	•	a. Perform functions (more flexibly) now performed
		by hard-wired control units e.g., changing form and
•		speed of signals as required to move from remotes to
		CPU and vice versa.
	•	b. Perform some low-level tasks now performed
	;	
		by the CPU reducing the workload on the CPU by
		perhaps as much as 5%.
,		c. Concentrate signals from several separate wires,
		multiplexing same to move on over single line.
		He said COMCET should make it easier for OC to design
		data circuits for Headquarters Building because COMCET
		rationalizes the remote-to-computer interface problem. A
		central switch for data circuits for this building may still be
	*	required. COMCET is not visualized as performing that
		function although perhaps it could to some extent.
	1	
		Chairman said he wanted to be assured that Commo was fully
		exposed to this COMCET plan and that Commo concurred
,		in it or at least did not object). said Commo had
•		been invited by OCS to all briefings with contractors and had
		been given the technical documentation by OCS. He said he
	, N	
	•	sees COMCET as an ADP front end rather than a communications
	•	- LACLULY. THE SAID DO CIDD'T KNOW WAS TIPTED AN ACCUMANCE OF THE CONTRACT OF

23/1

25X1	Commo was desired but he was willing to do whatever was needed in this regard. said Commo feels coordination has not been adequate.	
25X1	During the discussion, it emerged that there are multiple areas of concern in matters such as this within Commo's organizational structure and that perhaps this fact has impeded full coordination	
25X1	on a single point of contact for technical matters such as this and to inform OCS who that person is. OCS then to contact that person and work through that person with Commo to fill whatever gaps in coordination may still exist. (Commo to specify what the gaps are.) OCS's formal request for approval of the COMCET acquisition should evidence full coordination with Commo.	
<b>,</b>	10. IHC's File and Program Catalog  Chairman asked if components were having any problems in proceeding to update CIA entries in the File and Program Catalog	<b>3</b> •
	Response: "No problem yet".  Action: Change cards and listings due in O/PPB by 20 April.  (Due from O/PPB to DIA on 1 May.)	
	ll. BLIP File	
	Chairman asked if DD/I and DD/S&T had completed plans for exploitation of NPIC's BLIP file. said this is being worked on; remote query from Headquarters of this file on NPIC computers will require communications facilities not now in operation, and would have quite an impact on NPIC	

workload.

25X1

## 12. Problem Areas for the IPB

List of 8 problem areas handed out... for subsequent discussion by the Board.

Purpose: to come up with short list of most important areas for IP Board's attention. Please review.

13. Next Meeting of IP Board: Thursday, 9 April 1970 at 10 a.m.

25X1

# PROBLEM AREAS FOR THE IPB

- 1. Growth of requests for remote terminals and the need to devise policy guidance to cover this.
- 2. Need to review plans for significant upgrading of ADP facilities, to assess the need and to relate upgrading to resource requirements.
- 3. The problem of security vs. ADP. The more stringent the security policy the costlier our arrangements and the more proscribed our ability to relate with the Community.
- 4. Need to be more positive and forthcoming with regard to the concept of Community systems calling for data sharing. If not COINS, what are some realistic and useful alternatives.
- 5. How to thwart narrow parochialism in ADP components. Free dialogue and insistence on receiving advice and counsel, particularly from the more centralized OCS, appear worthy objectives.
- 6. Where do we need special skills and competences not now available or planned (e.g., ADP security, ADP-Commo)?
- 7. Must have a solid Agency ADP plan showing trends, resource data, goals and objectives.
- 8. Over the future, will need to assess plans and requirements for automatic dissemination, relating of information handling technology our stations abroad, and the recruitment, training and care and feeding of ADP personnel.
